cynomolgus monkeys infected with the Burma strain of ET-NANB. Both strands of ET1.1 were sequenced. Identity of the sequence with sequences in ethologic agents has been confirmed by locating a similar sequence in a viral strain isolated in Burma. The sequence of the Burma strain is given here. See AAQ141.0 for ET1.1. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CATGGCTCACTCGTAAATTCCTATACTAATACACCCTATACCGGTGCCCTCGGGCTGTTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence encodes a Hepatitis E viral hollow particle protein. This polypeptide can be used to raise antibodies to detect HEV infection in samples, e.g. by immuno-assay based techniques, and the nucleic acid can be used for the same in nucleic acid hybridisation assays. The polypeptides and nucleic acids allow more accurate detection of HEV than previously possible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

                                                              This sequence encodes a Hepatitis B viral hollow particle protein. This polypeptide can be used to raise antibodies to detect HEV infection in samples, e.g. by immuno-assay based techniques, and the nucleic acid can be used for the same in nucleic acid hybridisation assays. The polypeptides and nucleic acids allow more accurate detection of HEV than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GTCGAGACCTCTGGGGTGGCTGAGGAGGAGCTACCTCTGGTCTTGTTATGCTTTGCATA GTCGAGAGCTACCTCTGGTCTTGTTATGCTTTGCATA GTCGAGAGCTACCTCTGGTCTTGTTATGCTTTGCATA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RNA from an HEV strain isolated in the Xinjiang region of China was subjected to RT-PCR to obtain fragments corresp. to ORF2 (given in AAQ86592) and ORF3 (AAQ86599) that encoded antigenic proteins (AAR70323-24, respectively). DNA fragments were manipulated into pGEX vectors for production of GST fusion proteins in B. coli. Applications include HEV infection diagnosis, therapy and vaccine development. invention relates to novel n-mer polypeptides comprising amino acids of ORF-2 of HEV where n = 2-180. The polypeptides of the invention have virucide activity. The polypeptide of HEV, its fragments, and chimeric proteins, are useful for vaccine compositions and diagnosis in preventing and treating HEV infection by immunisation, which may also be applied in the diagnosis of HEV infection (HEV) for vaccine compositions Polypeptide fragments of hepatitis B virus (HEV) for va and diagnosis in preventing and treating HEV infection. 2; He × Example 1; Page 82-83; 91pp; Chinese g ŝ g ဥ TANG Z WPI; 2002-427096/45.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BOGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP from the land BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of
                                                                                                                                                                                                                                                                                                                                      209

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EACRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's

/clone_lib="wetcor: lambda ZAP Express/pBK-CMV; Site_1: EcoRl
/note="wetcor: lambda ZAP Express/pBK-CMV; Site_1: EcoRl
/s' adaptor); Site_2: MhoI (3' linker primer); The mixed
organ cDAP library was generated using the ZAP-cDNA method
by Stratagene. First strand cDNA synthesis was primed with
a 50 bp linker primer containing an oligo dT sequence
preceeded by a synthetic KhoI site. 5 prime adaptors were
used containing an EcoRl cohesive end. The finished cDNAs
were inserted in to the ZAP express vector
unidirectionally in the sense orientation with respect to
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."

                              melanogaster BAC library was prepared by Kazutoyo Osoegawa and melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP from the plant of the Library and how to order individual BAC clones, the entire library. If litters for hybridization from the BACPRAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                        1983
